

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1-67 (canceled).

68. (previously presented): A portable apparatus for communication and data collection comprising:

- a portable hand-held housing;

- a data processing unit housed by the housing and configured to run application software;

- a display housed by the housing and operably connected to the data processing unit;

- at least one user interface device housed by the housing and operably connected to the data processing unit;

- at least one memory housed by the housing and operably connected to the data processing unit for storing image data and for storing data from the data processing unit;

- a data interface configured to input image data from a camera and route the inputted image data to the data processing unit; and

- a mobile telephone unit housed by the housing and configured to (a) wirelessly transmit inputted image data to a remote location, (b) wirelessly transmit speech, and (c) wirelessly transmit text,

wherein the application software includes a routine for storing images in the at least one memory, and wherein the application software includes a routine that enables a user to select a destination for a wireless transmission of an image from a list of potential destinations.

69. (previously presented): The portable apparatus of claim 68, further comprising at least one battery that is housed within the housing and operatively connected to provide power to the portable apparatus.

70. (previously presented): The portable apparatus of claim 68, wherein the selection of a destination from the list of potential destinations operates differently depending on what application is being used.

71. (previously presented): The portable apparatus of claim 68, wherein the list has the capability to store telephone numbers and email addresses for a plurality of recipients.

72. (previously presented): The portable apparatus of claim 68, wherein the at least one user interface device comprises a keypad.

73. (previously presented): The portable apparatus of claim 68, wherein the at least one user interface device comprises a digitizer pad.

74. (previously presented): The portable apparatus of claim 68, wherein the at least one user interface device comprises a trackball.

75. (previously presented): The portable apparatus of claim 68, wherein the at least one user interface device comprises a keypad and a digitizer pad.

76. (previously presented): The portable apparatus of claim 68, wherein the application software includes a routine that enables a user to select a phone number from a list.

77. (currently amended): A method of operating a portable apparatus for communication and data collection, the portable apparatus having a portable hand-held housing, the method comprising the ~~steps~~steps of:

running application software;

displaying data on a display that is housed by the housing;

accepting input via a user interface device that is housed by the housing;

inputting image data from a camera;

recording, in a memory that is housed by the housing, the inputted image data;

wirelessly transmitting the recorded ~~input-image~~image data to a remote location via a mobile telephone unit that is housed by the housing;

wirelessly transmitting text via the mobile telephone unit; and

wirelessly transmitting speech via the mobile telephone unit.

wherein the application software includes a routine that enables a user to select a destination, from a list of potential destinations, for a wireless transmission of the recorded image data.

78. (previously presented): The method of claim 77, wherein the selection of a destination from the list of potential destinations operates differently depending on what application is being used.

79. (previously presented): The method of claim 77, wherein the list has the capability to store telephone numbers and email addresses for a plurality of recipients.

80. (previously presented): The method of claim 77, further comprising the step of accepting input from a keypad.

81. (previously presented): The method of claim 77, further comprising the step of accepting input from a digitizer pad.

82. (previously presented): The method of claim 77, further comprising the step of accepting input from a trackball.

83. (previously presented): The method of claim 77, wherein the application software includes a routine that enables a user to select a phone number from a list.
